<p>Teaching Time: 3 hours</p> <p>1.2 Information in images (3h)</p> <p>Introduction to logarithms via the bit or byte as unit of amount of information ($N = 2I$).</p> <p>Logarithmic ('times') ladders of quantities over a wide range of values.</p> <p>Processing images: averages or medians to smooth or reduce noise; ways of sharpening or finding edges.</p> <p>Noise as an example of uncertainty in information</p>	<ul style="list-style-type: none"> • Images are composed of discrete pixels, each specified in brightness (and perhaps colour) by numbers. Image enhancement, for instance removing noise, enhancing contrast, locating edges, using false colour, can help to extract the maximum information from an image. Averaging can smooth or remove noise from images. Medians of sets of pixels can often nearly completely eliminate random noise. Logarithmic measures can help deal with very large or small quantities. 'Times' scales are logarithmic representations 	<ul style="list-style-type: none"> • Activity 50S Software based 'Image processing: The surface of Mercury' • Plus at least one of: • Activity 60S Software based 'Image enhancing: Volcanoes on Io' • Activity 70S Software based 'Medical uses of x-ray images' • Activity 80S Software based 'Medical uses of ultrasound images' • Activity 120S Software Based 'How big are your computer files?' 	<ul style="list-style-type: none"> • Question 60S Short Answer 'A scanning electron microscope image of Velcro' • Question 70S Short Answer 'Image processing by brightness and contrast control' • Question 110S Short Answer 'Bits and bytes in images' • Question 120S Short Answer 'Logarithms and powers' • Question 130C Comprehension 'X-ray image of the Kepler supernova remnant' 	<p>Able to learn new things quickly</p> <p>Literate in word number and informatics.</p>
